

Container Lashing System

Container Lashing N5, 2x3m, moveable, 2,4m high

Container Lashing System

2,00 x 3,00 meter horizontal movable, height 2,40 meter - 32mm belt system (50mm optional)

Container lashing systems are restraint systems pre-assembled for immediate use and thus easy and fast to handle.

Container lashing systems consist of two vertical bands with 2400 mm (for ISO-containers) or 2600 mm (for High-Cube containers) length that are fixed with sewed hooks in the eyelets of the container.

Attached to these vertical straps are, depending on the requirements of use, two to four tightly sewed or flexible horizontal straps which are connected with special fasteners.

Our container lashings are made of extremely rigid polyester fibers, ensuring best recovery and thus excellent protection of your products. Accordingly the textile material avoids the damaging of delicate surfaces.

... what is container lashing ?

The container-lashing and the container-cover are ready-made aids, which facilitate fast and effective load securing in containers.

The goods are protected against damage, slipping etc. during transport and when opening the container doors.

There is no danger of injury for the receiver when unloading.

- The alternative to complex timber constructions
- Ready-made belt system = time/cost reduction
- The fast and inexpensive solution for cargo securing in containers
- Easy hooking of the four vertical straps into the existing container attachment points.
- Available as 32mm and 50mm belt system
